Welcome To **Appointer** Application

Empowering Healthcare with Seamless Collaboration: Connecting Doctors, Patients, and Clinics in One Smart App.

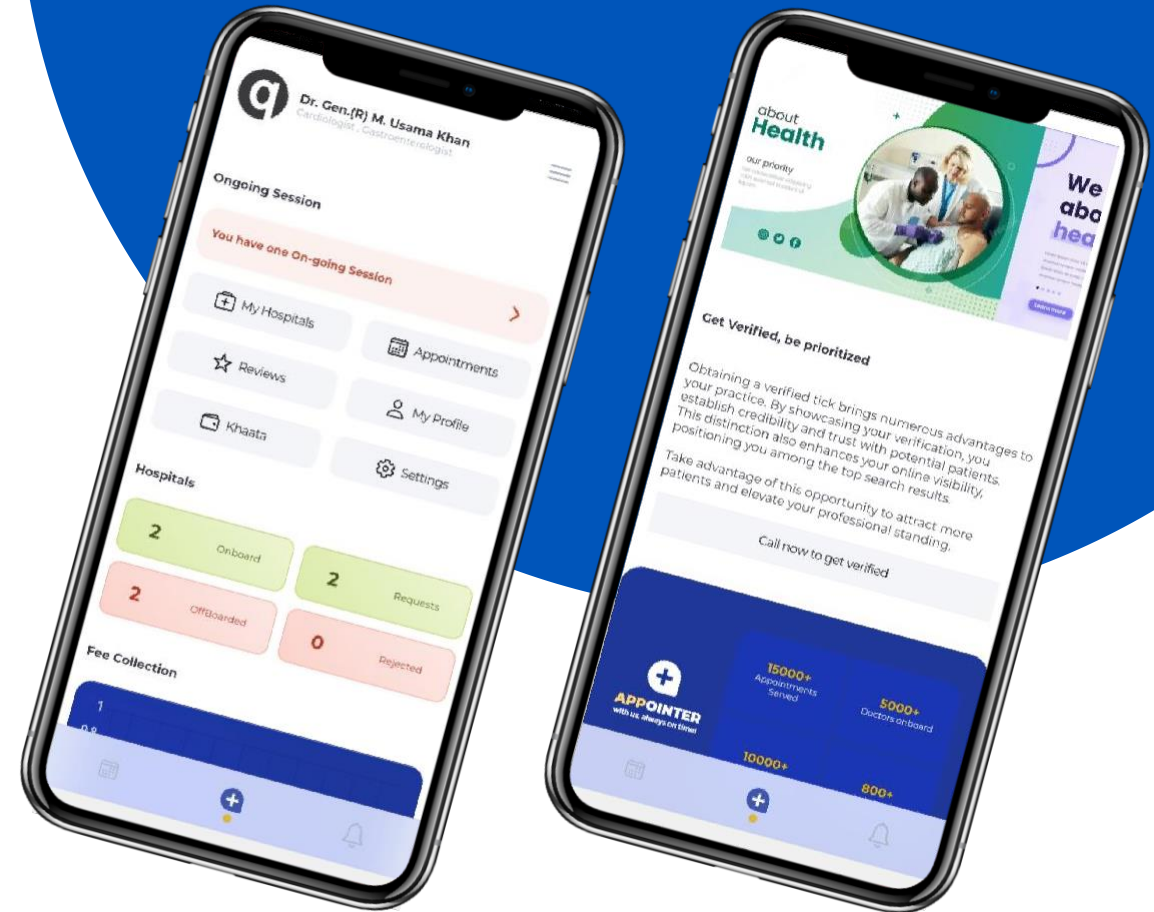

About Application

The Appointer Application is a comprehensive platform designed to streamline communication and management among doctors, clinics, personal assistants (PAs), and patients/users. With user-specific features, the app ensures efficient appointment scheduling, profile management, and financial tracking. Developed using Ionic 6.1.9 and Angular 14.0.0, the application is divided into four main modules:

- ✓ Doctor App
- ✓ Clinic App
- ✓ PA App
- ✓ User/Patient App

Doctor **Module**

The Doctor Module enables doctors to efficiently manage their profiles, appointments, and availability. Doctors can set their working hours for each hospital, assign a Personal Assistant (PA) for appointment management, and adjust consultation fees, with updates reflected across all platforms. They can mark leave days, receive real-time notifications for new appointments and changes, and track both pending and completed appointments. This module streamlines administrative tasks, allowing doctors to focus more on patient care while keeping their schedules organized and up-to-date.

Doctor Module **Features**

Sign-In/Sign-Up

Doctors can register using phone number (with verification), or via Facebook/Gmail for easy access.

Home Dashboard

View today's appointments, hospital statistics, and suggestions for doctor verification.

Profile Management

Update personal and professional details, availability, and contact information.

My Hospitals

Manage onboarded, pending, and offboarded clinics with customizable settings.

View Appointments

Sort appointments by date and status for streamlined scheduling.

Khata (Finance)

Track account summaries, payments, and outstanding dues for all associations.

Reviews

Collect ratings and feedback from patients for continuous improvement.

Notifications

Stay informed with alerts for appointments, hospital requests, and session updates.

PA Integration

Assign personal assistants for session management and fee tracking.

Leaves Management

Notify hospitals and PAs of unavailability to avoid scheduling conflicts.

Consultation Timings

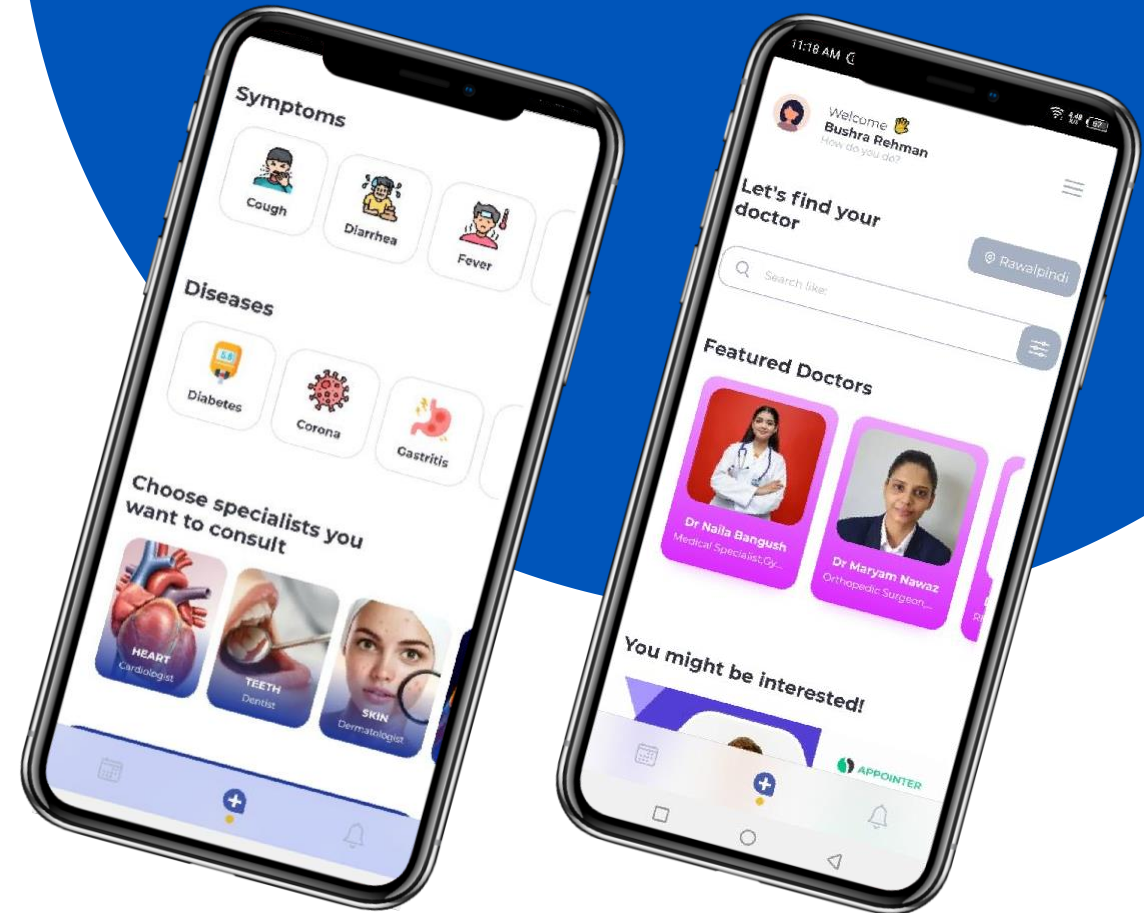

Customize availability for each hospital with flexible timing options

Privacy Policy

Ensure data security with clear privacy guidelines and compliance measures

Patient Module

The Patient Module allows patients to easily book appointments, view medical records, and communicate with their doctors. Patients can check their consultation history, access prescriptions, and receive reminders for upcoming appointments. The module also provides features for managing personal health data, such as tracking medications and treatment plans. With a user-friendly interface, patients can efficiently manage their healthcare needs, schedule visits with doctors, and stay updated on their health status in real time.

Patient Module **Features**

Sign-In/Sign-Up

Users can easily register via phone, Facebook, or Gmail, with a unified login system and mandatory acceptance of Terms & Conditions for security.

Home

The app allows patients to search doctors by specialization, gender, or experience, generate appointment tokens, and receive disease-based or specialist-specific recommendations, including nearby options for convenience.

Doctors Profile

Patients can view detailed doctor profiles, including specialties and patient reviews, access a list of hospitals where the doctor provides appointments, and book appointments with a unique token for tracking.

My Appointments

Manage appointments with filters for status (Pending, Consulting, Checked, Canceled) for easy tracking and organization.

Family Members

Manage and book appointments for family members or other patients, making it convenient to coordinate healthcare needs.

Notifications

Receive real-time alerts for appointment confirmations, ensuring you never miss an important visit.

About Us

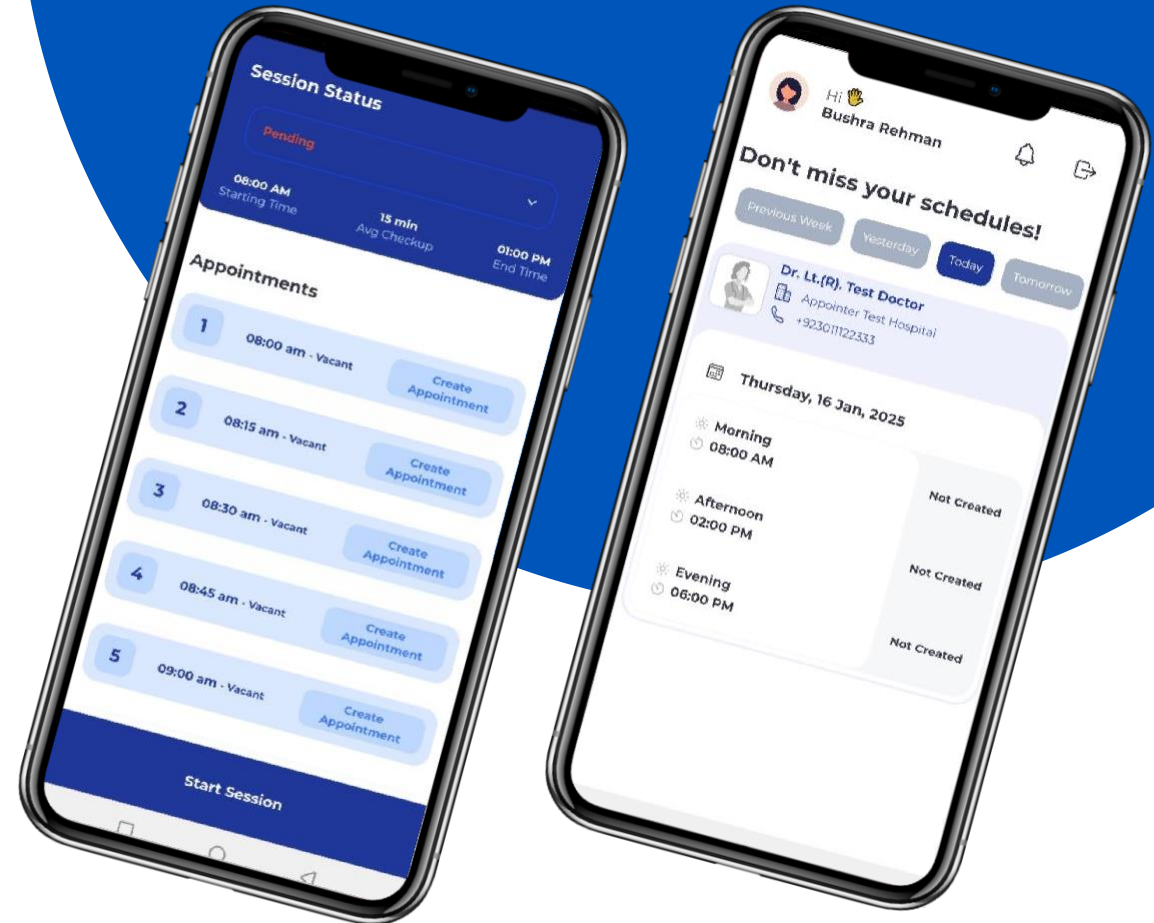

Access general information about the app and review the privacy terms to understand data usage and security.

Log out

Secure logout feature to protect personal data and ensure privacy after each session.

PA's Module

The PA Module enables Personal Assistants to manage appointment scheduling, fee tracking, and doctor-patient communications. PAs can organize and update doctor availability, handle patient appointment bookings, and ensure fee collection is up-to-date. They can also send reminders and notifications to both doctors and patients, ensuring smooth coordination. This module helps PAs streamline administrative tasks, improving the overall efficiency of medical practice management and enhancing patient care.

PA's Module Features

Signup / Logout

The module enables easy registration via phone, Facebook, or Gmail, with mandatory Terms & Conditions acceptance for compliance. It also ensures data security with a secure logout feature

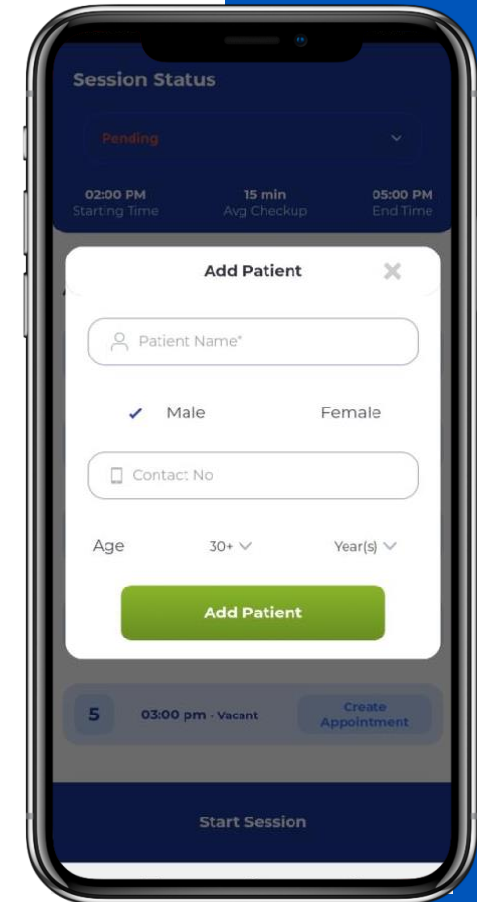

Home

The Home section serves as a comprehensive dashboard, displaying assigned doctors' details and upcoming appointments. It includes appointment filters, allowing users to sort by Previous Week, Yesterday, Today, Tomorrow, and Next Week. PAs can efficiently manage session statuses by marking them as Emergency Checking, Meeting, Break, Closed, or Canceled. Additionally, they can call the next appointment or recall the current token, with a prompt to update the fee status (e.g., Fee Collected, Pending, or Concessioner) before proceeding. The section also tracks fee collection, highlighting collected and concessioner fees, while providing a patient summary and session fee details for streamlined management.

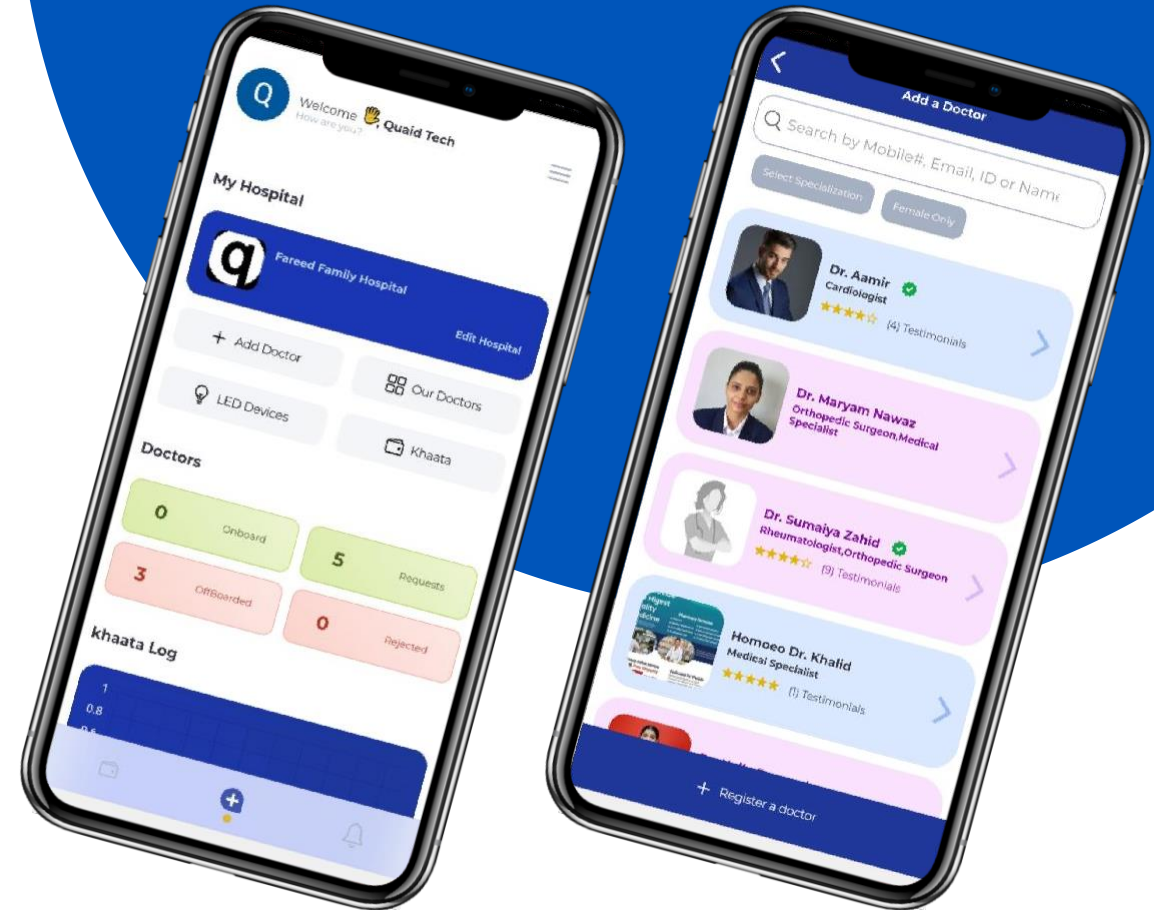

Notifications

The Notifications section ensures users stay informed with timely alerts for doctor assignments and leave updates, enabling seamless coordination and management.

Clinic's Module

The Clinic's Module allows clinic administrators to manage doctor schedules, appointments, and patient flow. Clinics can track doctor availability, coordinate patient bookings, and manage hospital resources. Administrators can also monitor financials, including fee collection and outstanding dues, and ensure smooth operations by receiving real-time updates on doctor availability and appointment statuses. This module helps clinics optimize scheduling, improve operational efficiency, and provide better patient care.

Clinic's Module **Features**

Streamlined Registration

Clinics can easily register using phone verification or via Facebook/Gmail with mandatory Terms & Conditions acceptance.

Dashboard

Access hospital details, manage menus, track doctor statistics, and view fee collection insights with intuitive graphs.

Profile Management

Maintain clinic profiles with photos, contact details, address, and operating hours for seamless communication.

Association Management

Use filters to organize doctor associations and customize fees, timings, tokens, and permissions for better collaboration.

Add Doctor with Ease

Search doctors by email, phone, or ID using specialized filters, view profiles, and send onboarding requests effortlessly.

LED Device Integration

Quickly search and identify LED devices using SSID for enhanced connectivity.

Khata for Financial Tracking

Monitor and manage finances with detailed summaries for onboarded and offboarded doctors.

Notifications

Stay updated with alerts for appointments, doctor requests, and leave updates for better coordination.

About Us

Showcase clinic history, achievements, and vision to establish trust and credibility.

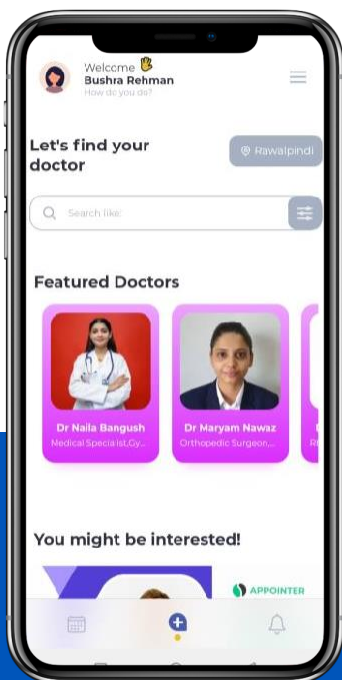

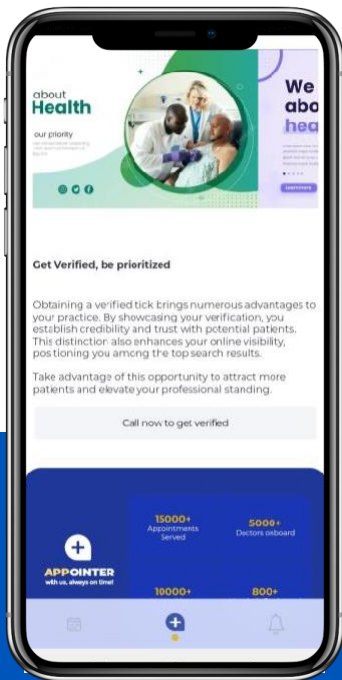

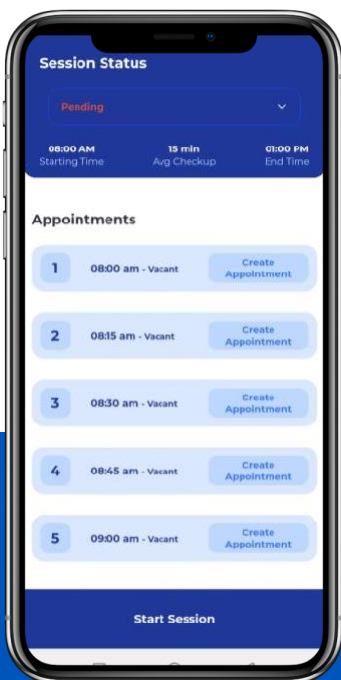

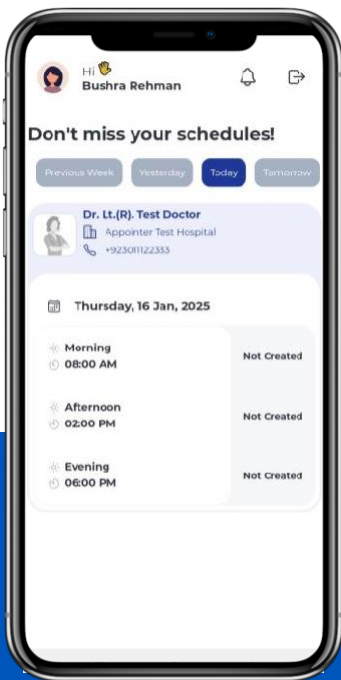

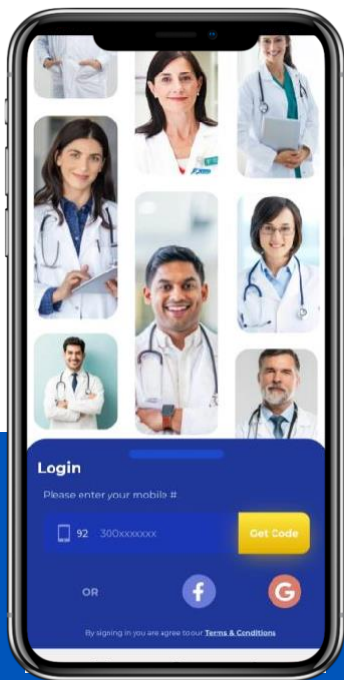

Privacy and Data Security

Ensure user trust with clear privacy policies addressing data handling and security.

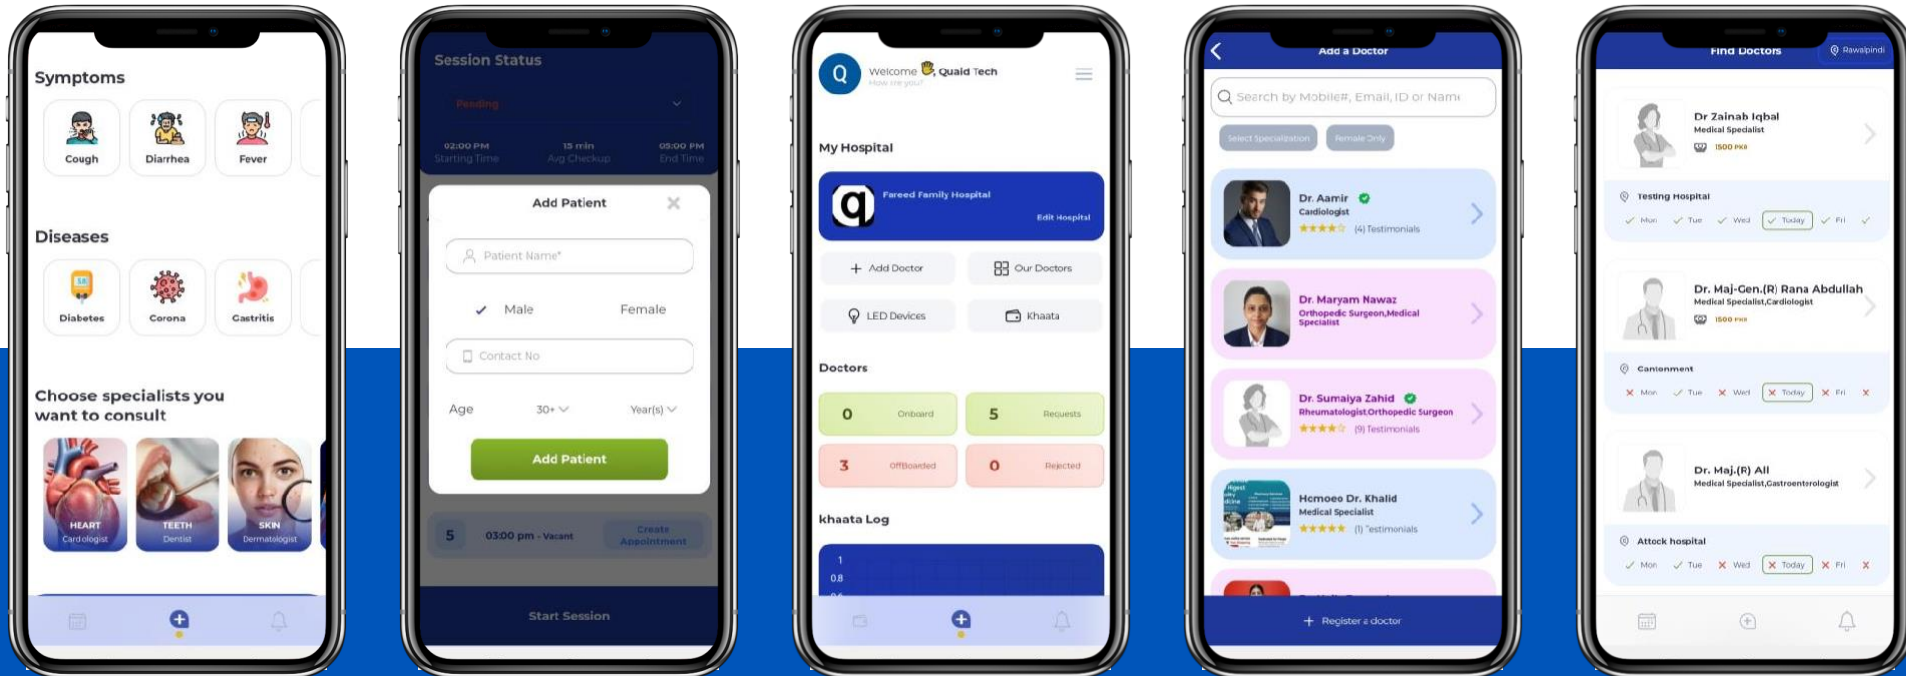

Secure Logout

Log out safely to protect sensitive information and maintain account security.

User Interface Design

User Interface Design

Technology Used

01. Angular 14.0.0

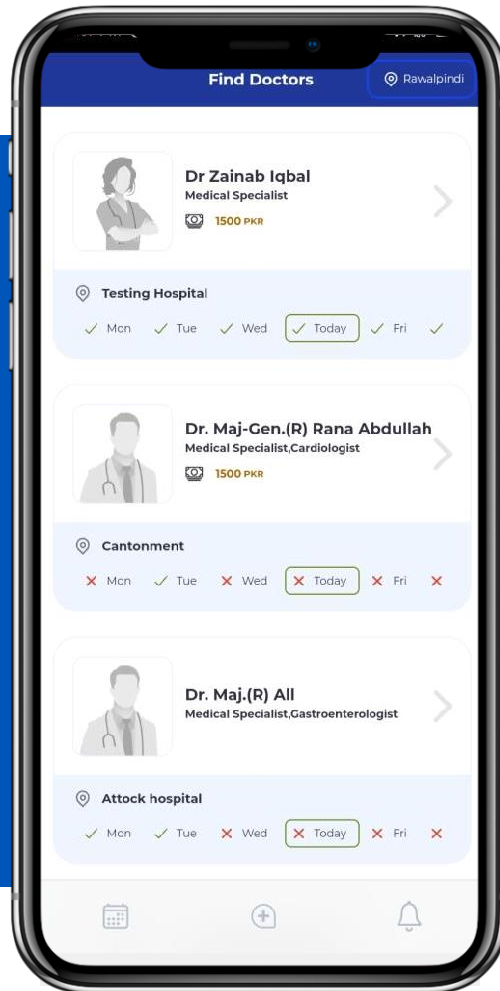

is a robust, open-source front-end framework for building scalable and efficient web applications. It provides a solid foundation for developing the app's complex features, such as data binding, routing, and form handling, allowing for a smooth and responsive interface.

02. Ionic 6.1.9

Ionic is a cross-platform framework that ensures the app works seamlessly on both mobile and web platforms, providing a native-like experience while maintaining consistency. It leverages Angular's capabilities, speeding up development and integrating native device features like camera, GPS, and notifications.

Together, Angular and Ionic create a powerful combination, ensuring the app is highly functional, user-friendly, and adaptable across multiple platforms.

Problem Statement

Our app addresses the complex challenge of managing multiple hospitals and doctors in a streamlined, efficient manner. Clinics often struggle with keeping track of doctor schedules, fee collections, and patient appointments, leading to confusion and miscommunication. Our app solves these issues by offering an integrated platform that simplifies doctor onboarding, enables easy appointment management, tracks financial details, and ensures seamless communication between doctors, PAs, and hospitals. This results in better coordination, improved patient care, and enhanced operational efficiency for healthcare providers.

Target Audience

Hospital & Clinics

- **Small to Medium Clinics:** Looking for streamlined management of doctor associations, appointments, and financial records.
- **Multi-Specialty Hospitals:** Managing multiple doctors, schedules, and patient interactions across various departments.

Doctors & Medical Practitioners

- **Independent Practitioners:** Seeking opportunities to associate with clinics and manage consultation schedules efficiently.
- **Specialist Doctors:** Interested in managing hospital equity, timing adjustments, and patient engagement through a single platform.

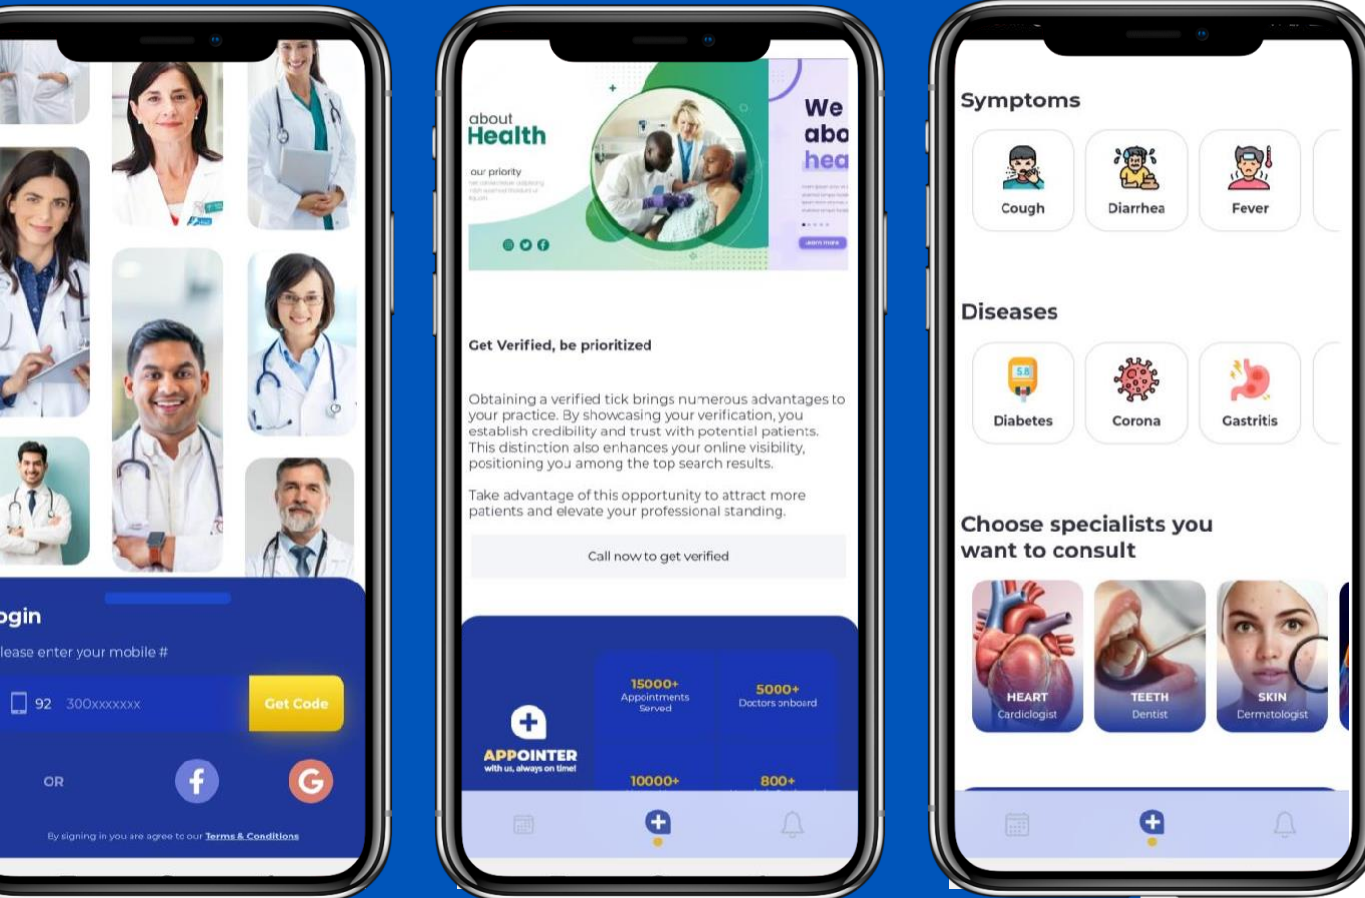

Administrative Staff

- **Clinic Managers:** Responsible for onboarding doctors, monitoring performance, and maintaining financial records.
- **Hospital Administrators:** Focused on optimizing operations, tracking statistics, and ensuring seamless patient management.

Patients

While not a direct audience, the app indirectly serves patients by improving the organization and availability of healthcare services through its doctor and clinic management features.

Benefits of Using Appointer App

- ✓ **Efficient Management**
Easily manage doctor appointments, hospital associations, and financial tracking, all in one platform.
- ✓ **Seamless Coordination**
Stay updated with real-time notifications and customizable settings for doctors, schedules, and patient interactions.
- ✓ **Enhanced Data Security**
Stay updated with real-time notifications and customizable settings for doctors, schedules, and patient interactions.
- ✓ **Simplified Doctor Onboarding**
Stay updated with real-time notifications and customizable settings for doctors, schedules, and patient interactions.
- ✓ **Comprehensive Insights**
Stay updated with real-time notifications and customizable settings for doctors, schedules, and patient interactions.
